

STILL LIFE

DIGITAL PAINTING

Create a collage of at least 3-4 objects that represent your chosen opposite theme.

Make them appear they are sitting on a surface and they are in proportion to one another.

(reference any of our previous collage project tutorials if you need a refresh on how to do this)

MERGE THE LAYERS
TOGETHER WHEN DONE
WITH YOUR COLLAGE.

(select all your layers by
holding shift and clicking
each one. Then click the
button the lines at the top
right of the layer panel.
Merge Layers)

SAVE AS A JPEG AND PUT
IN YOUR PORTFOLIO IT
WILL BE GRADED
SEPERATELY!

When merged, Filter>
Stylize > Find Edges

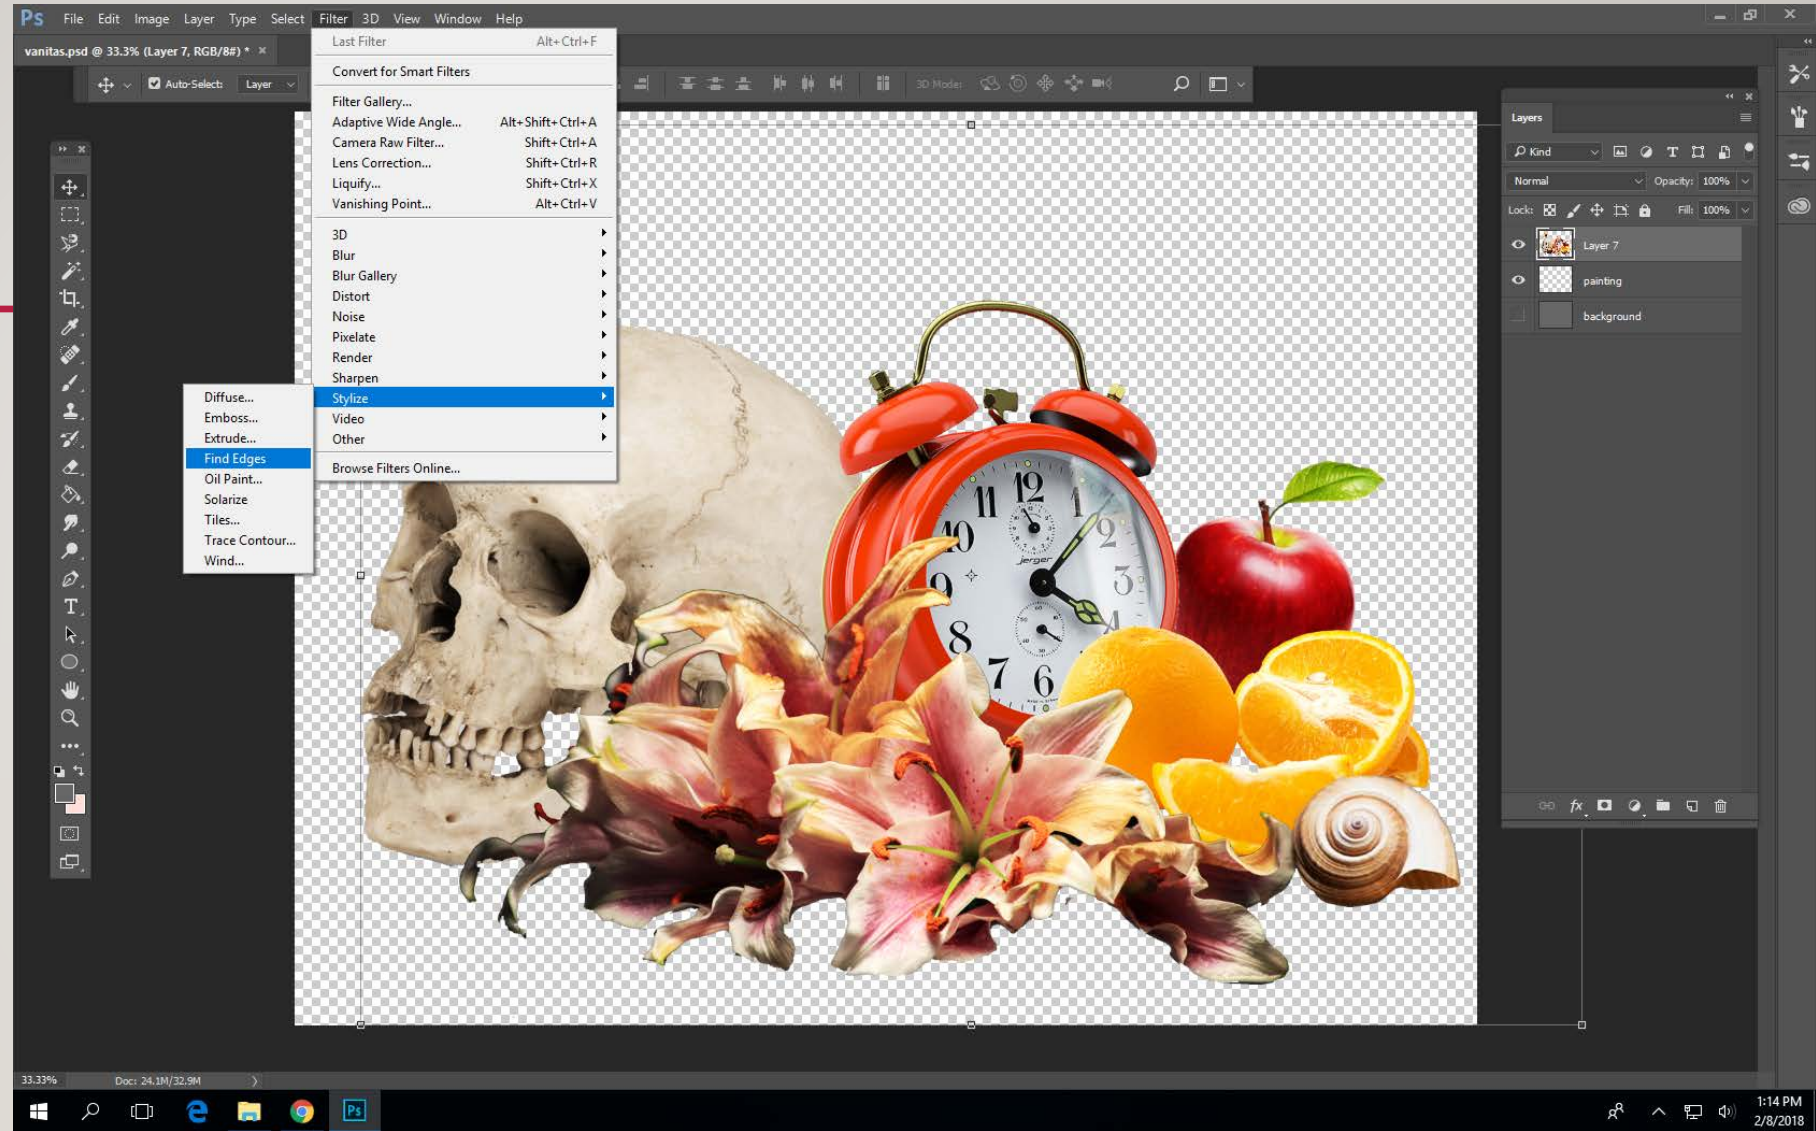

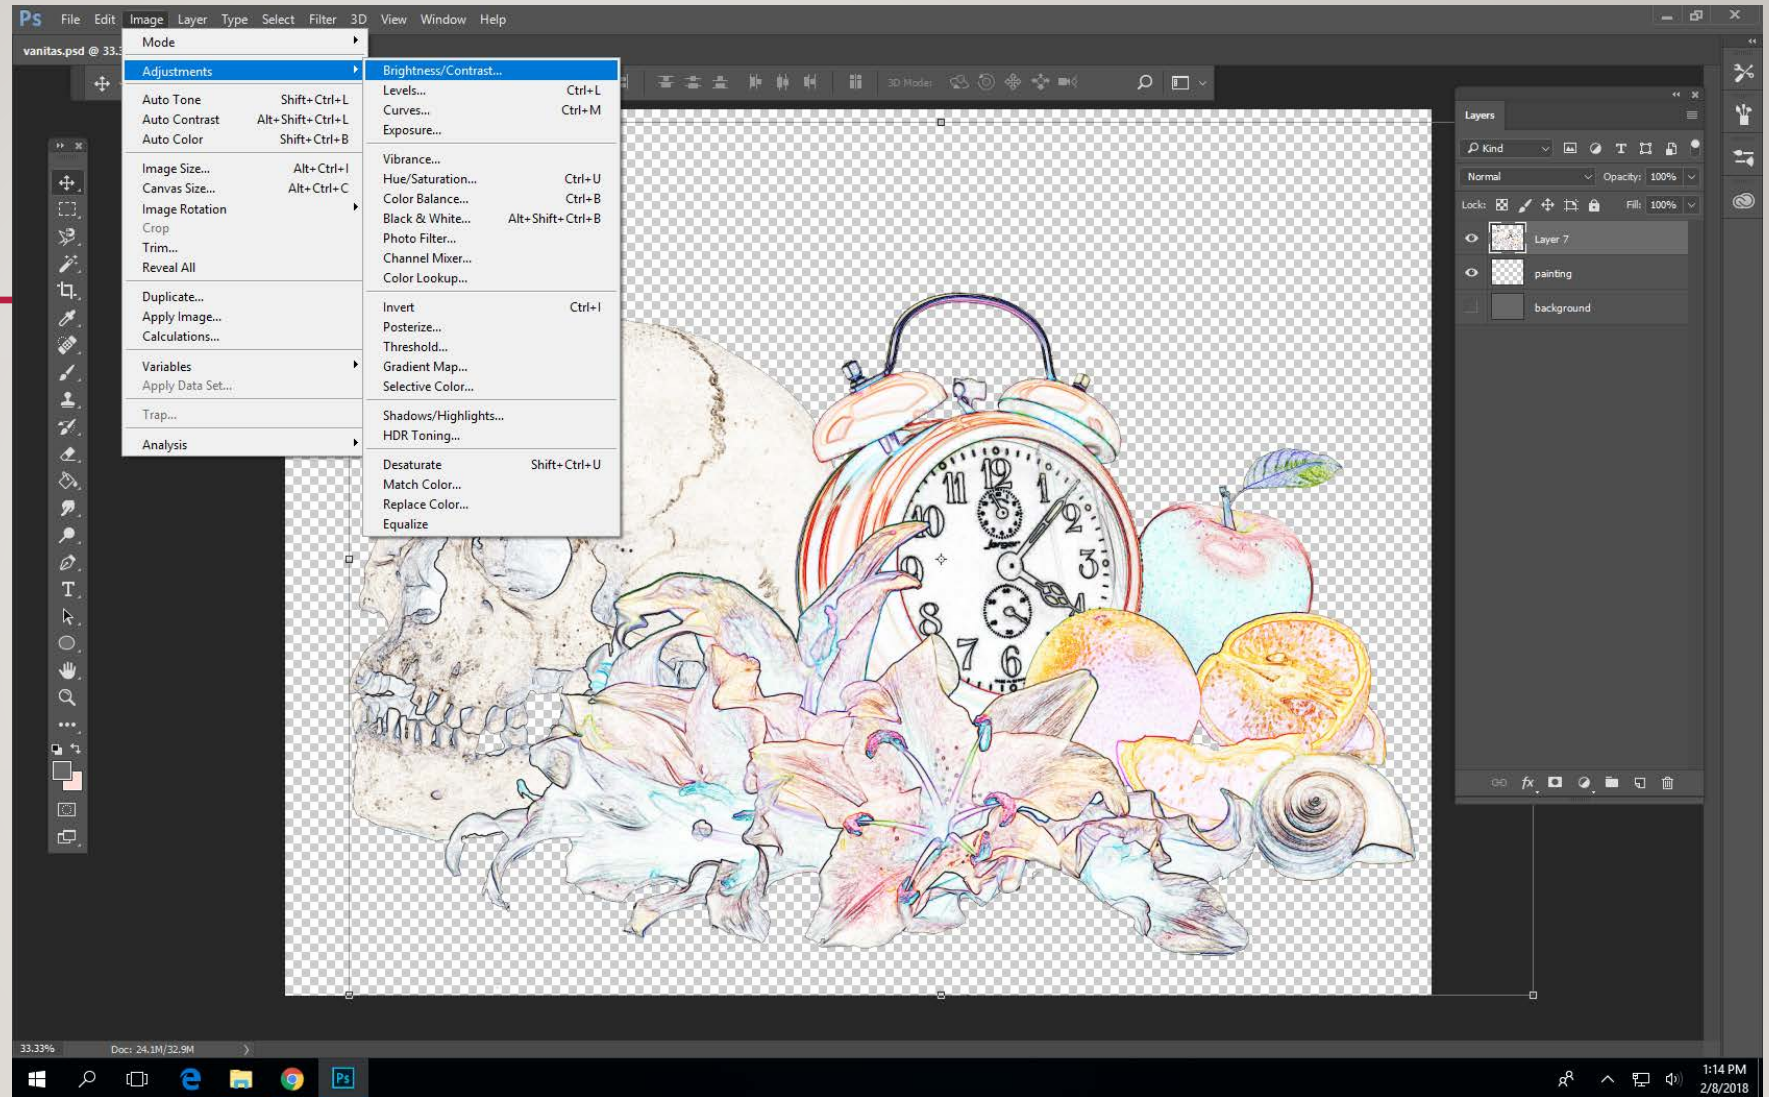

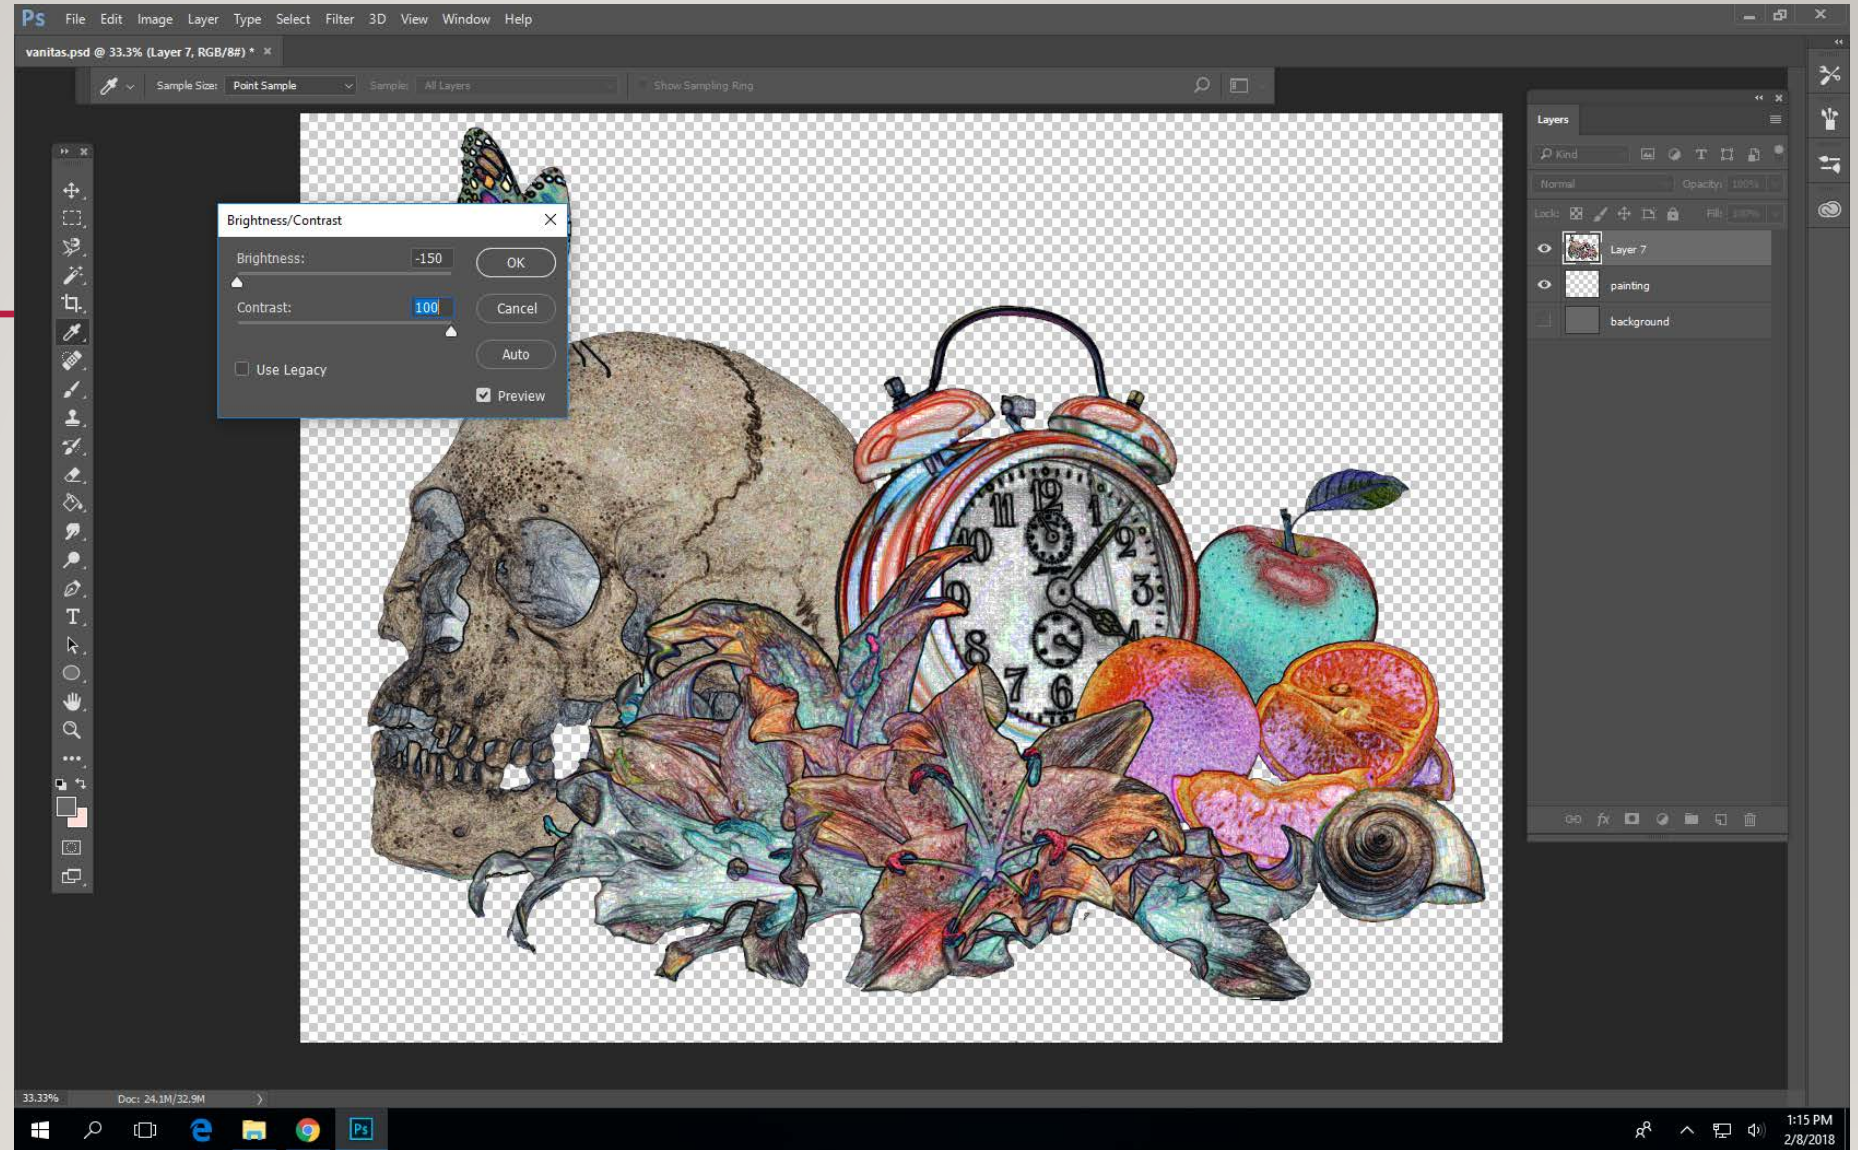

Image > Adjustments> Brightness and Contrast

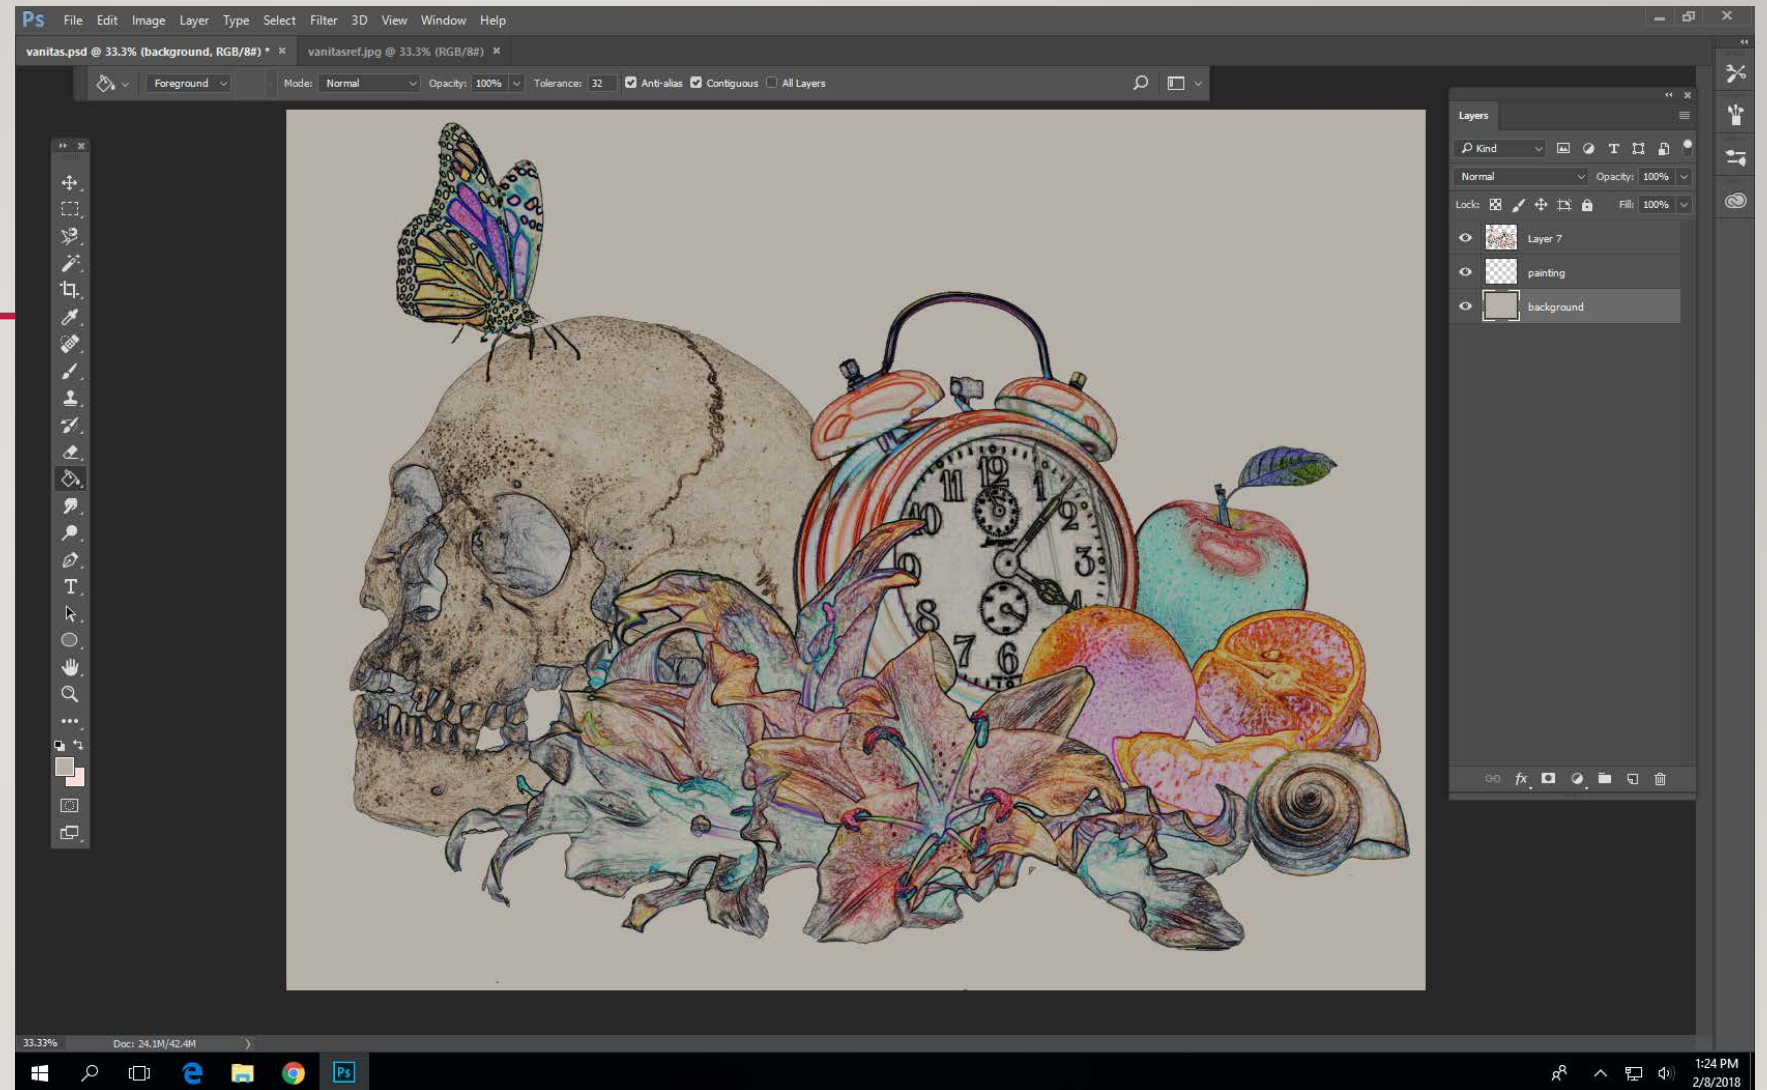

Play with the
Brightness and
Contrast until your
reference image is
visible and you can see
all the edges clearly.

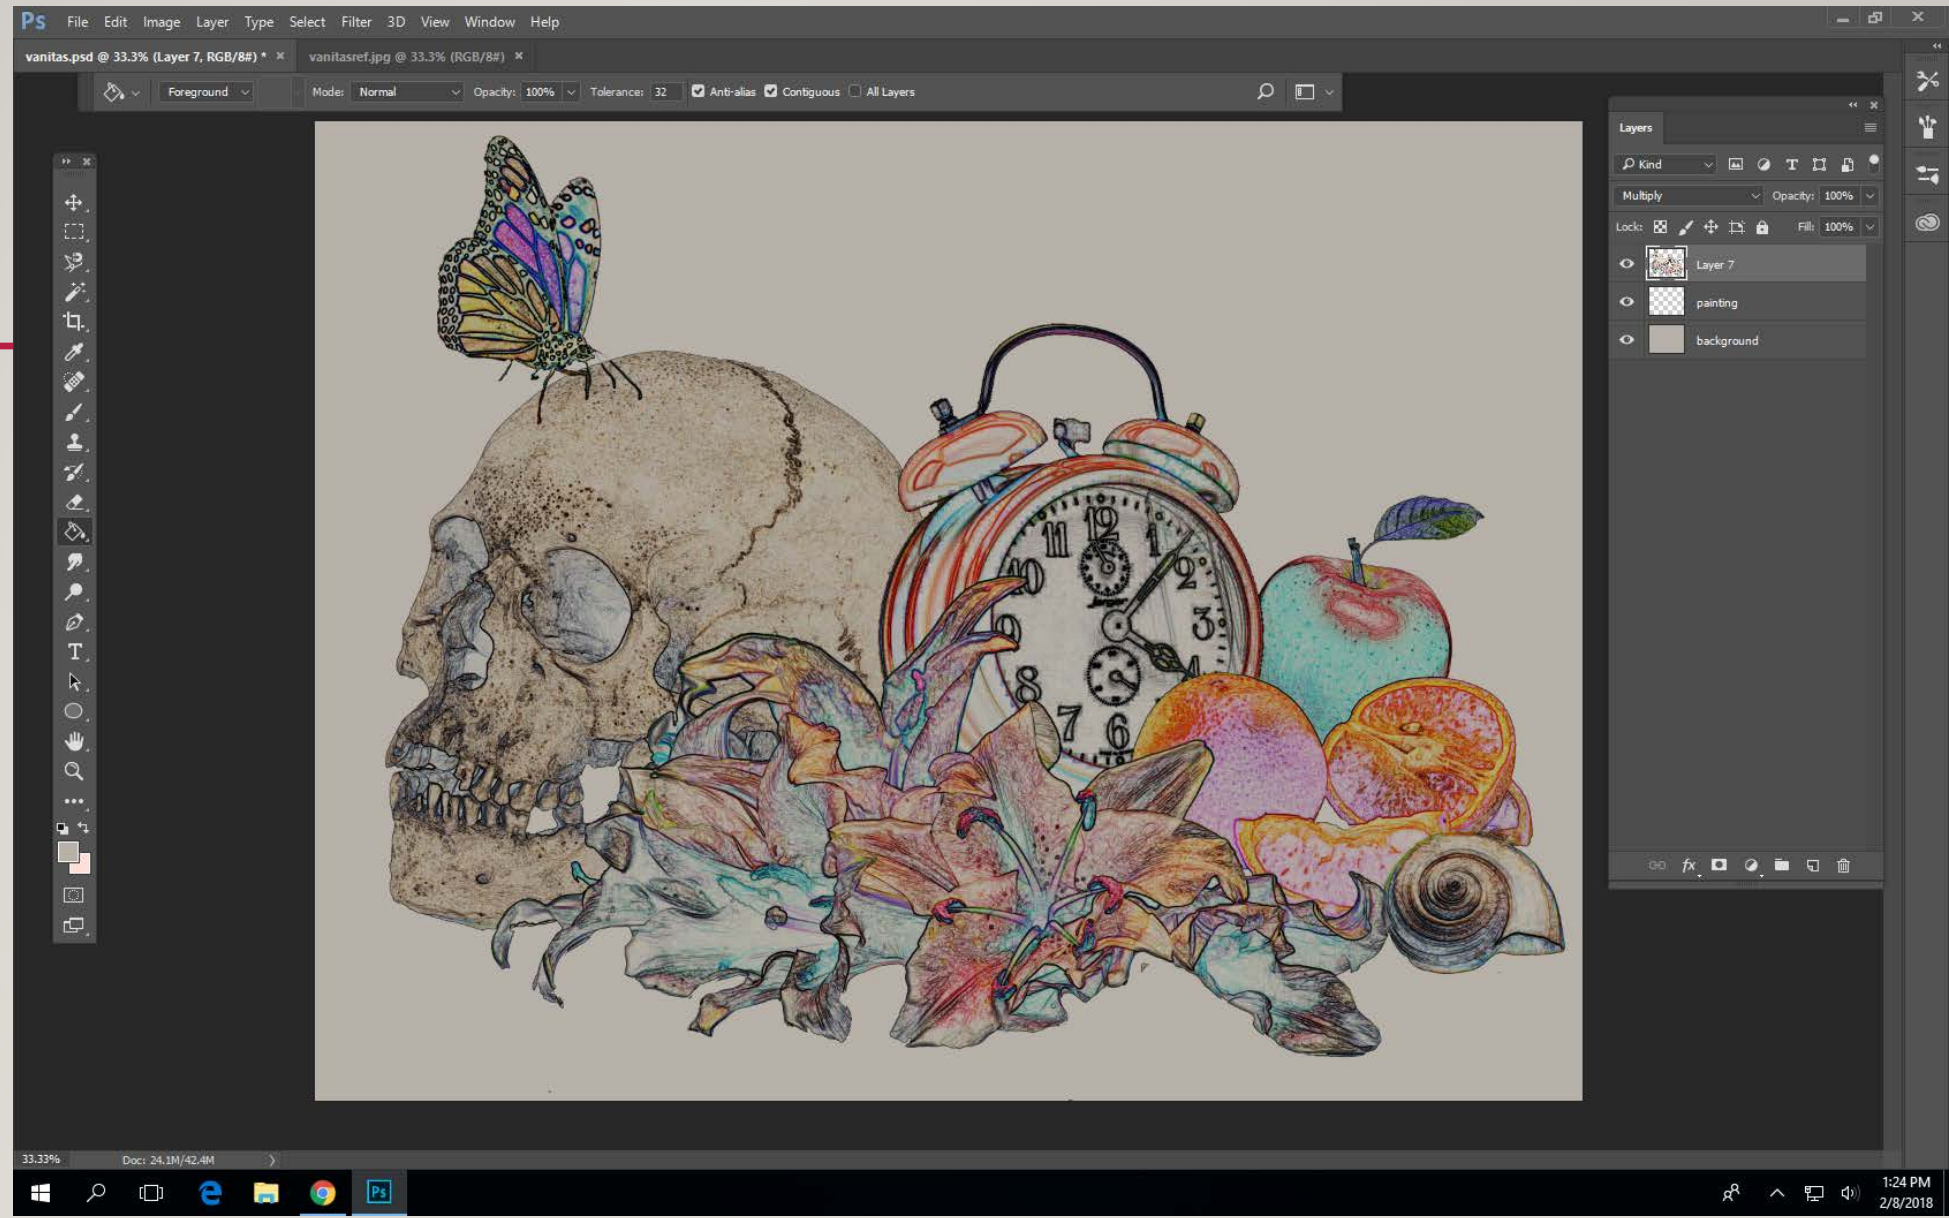

Make the background a light to medium neutral color. Grey or tan works well.

Use the fill bucket tool.

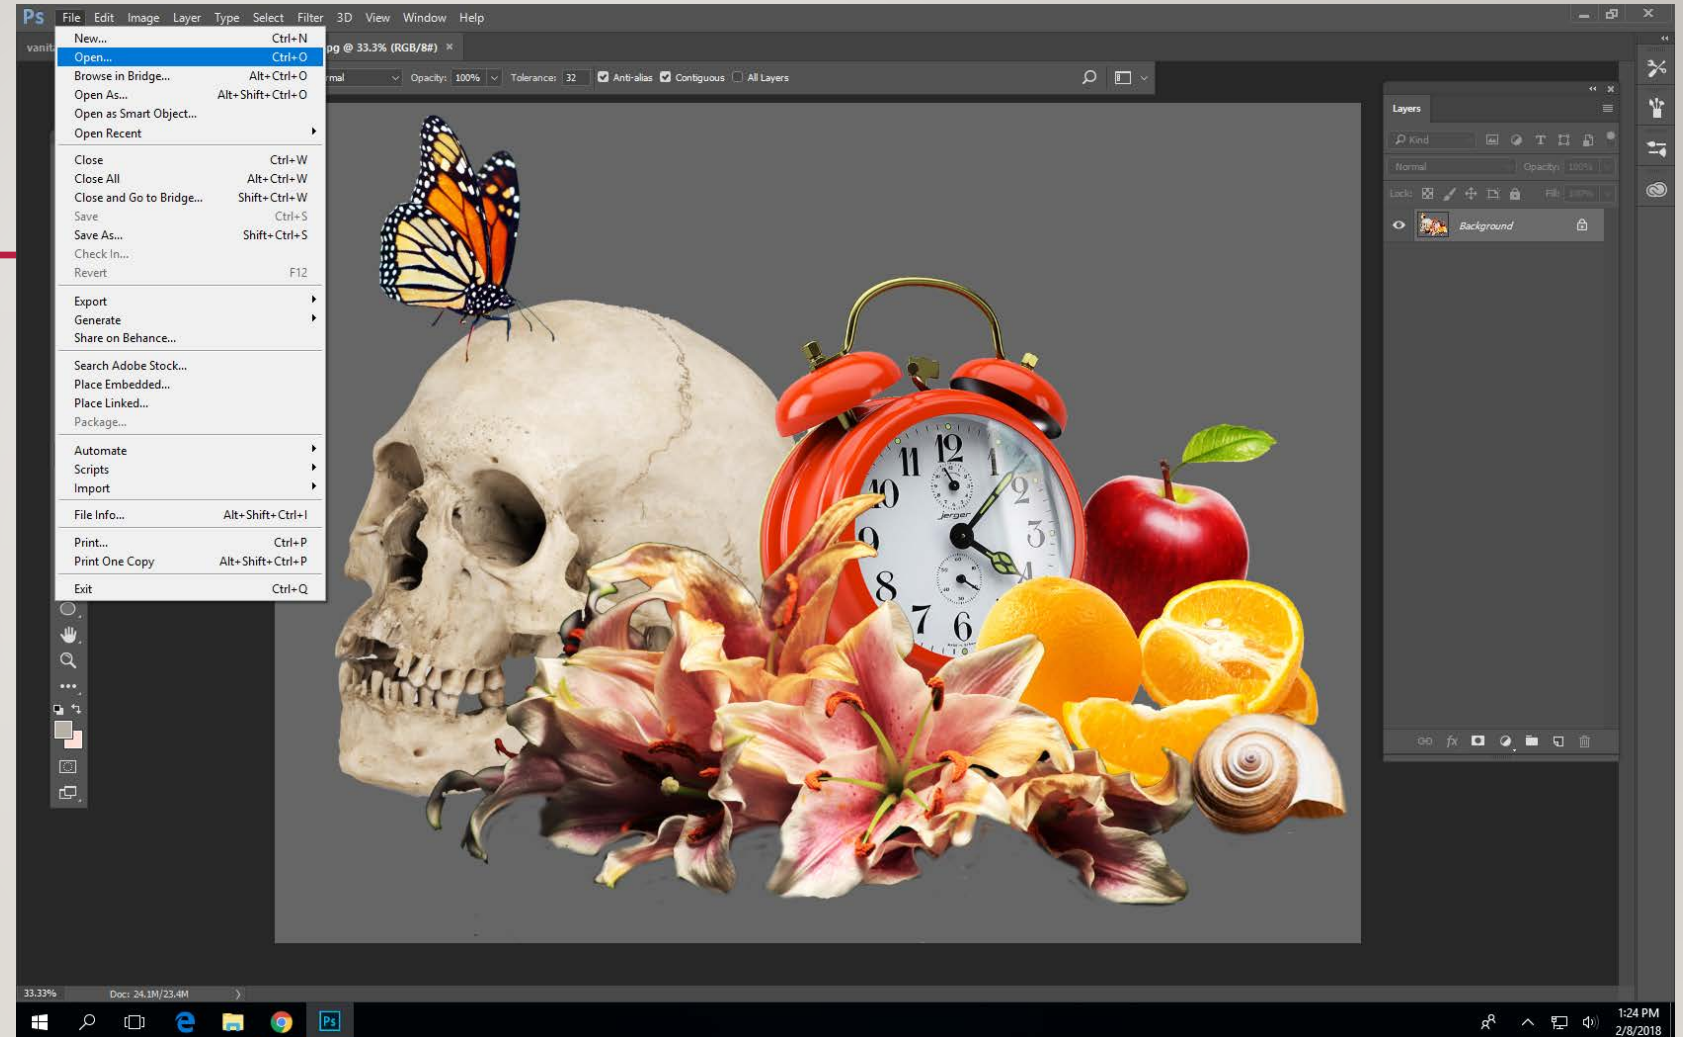

Change the layer style of your find edges collage layer from NORMAL to MULTIPLY. LOCK THIS LAYER

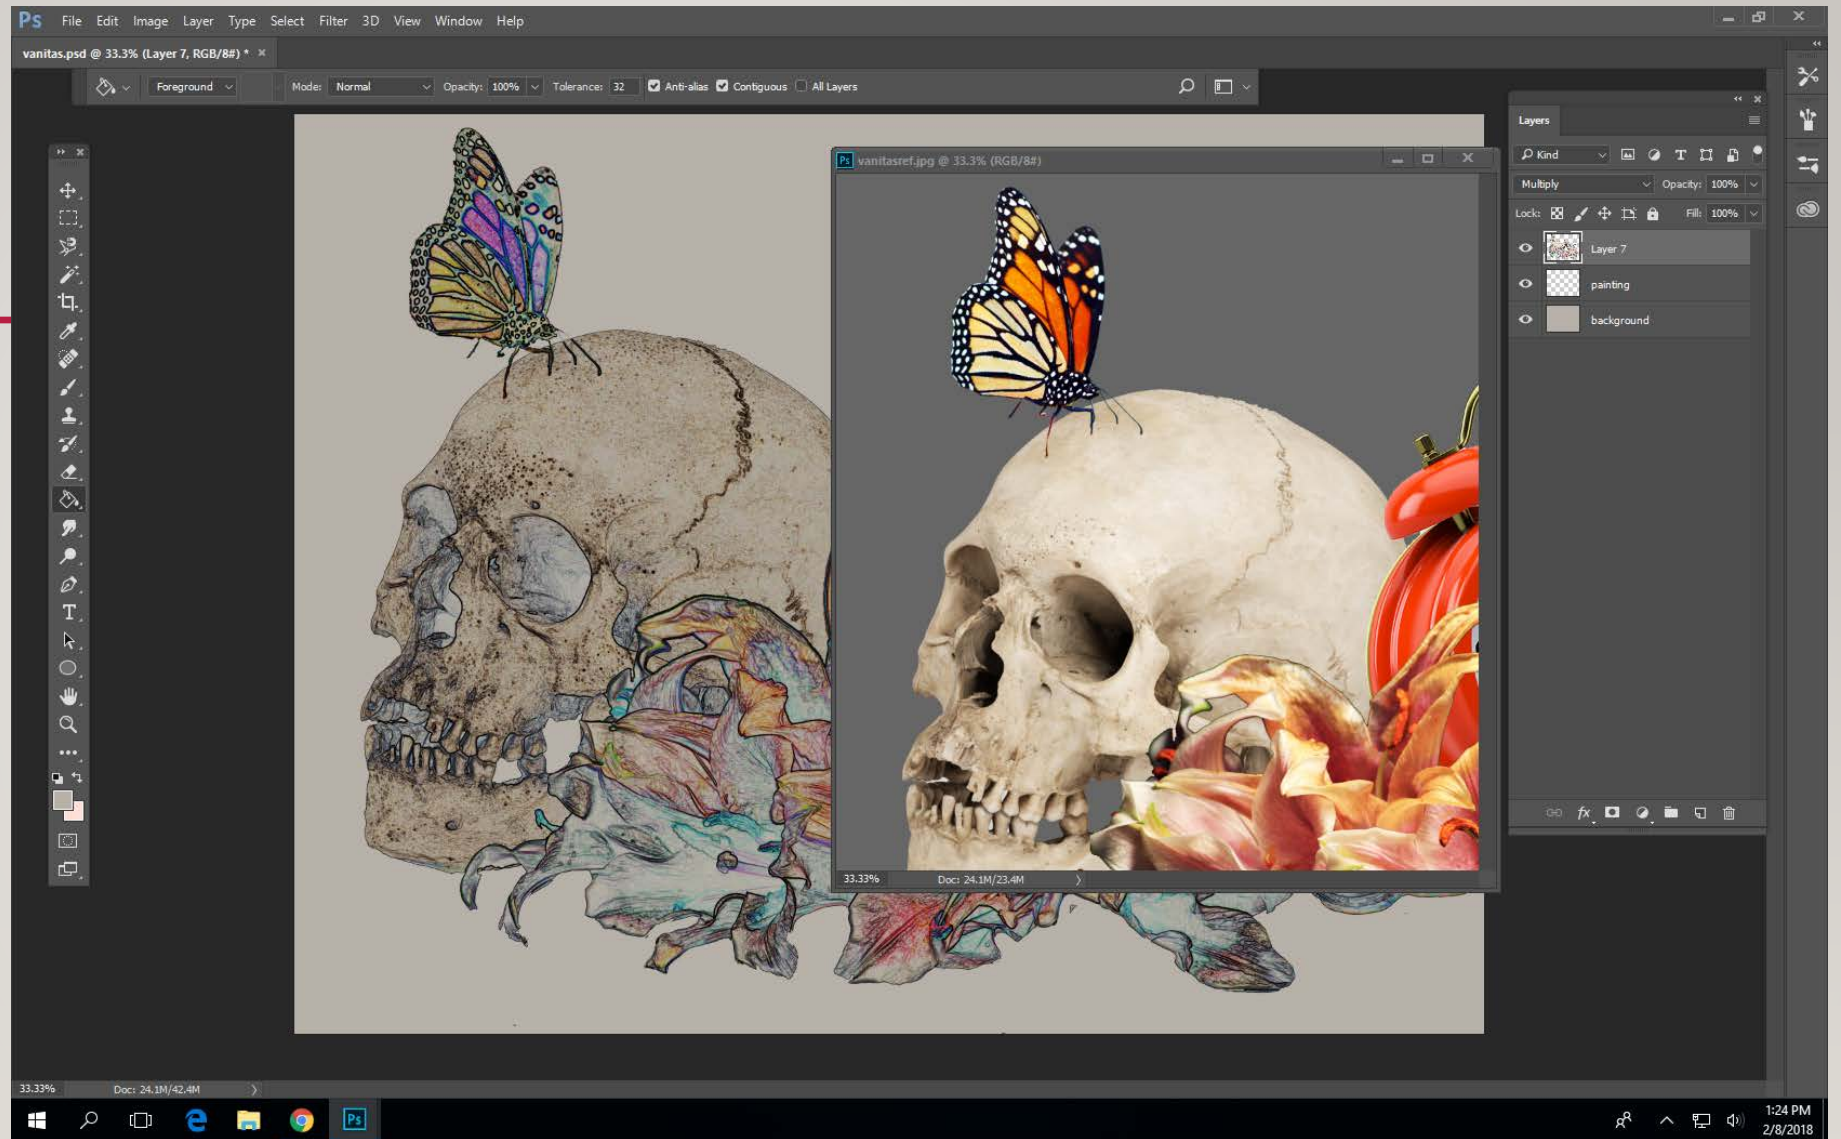

Add a new layer underneath that one. This is your painting layer.

File > Open > Reference
Collage jpeg

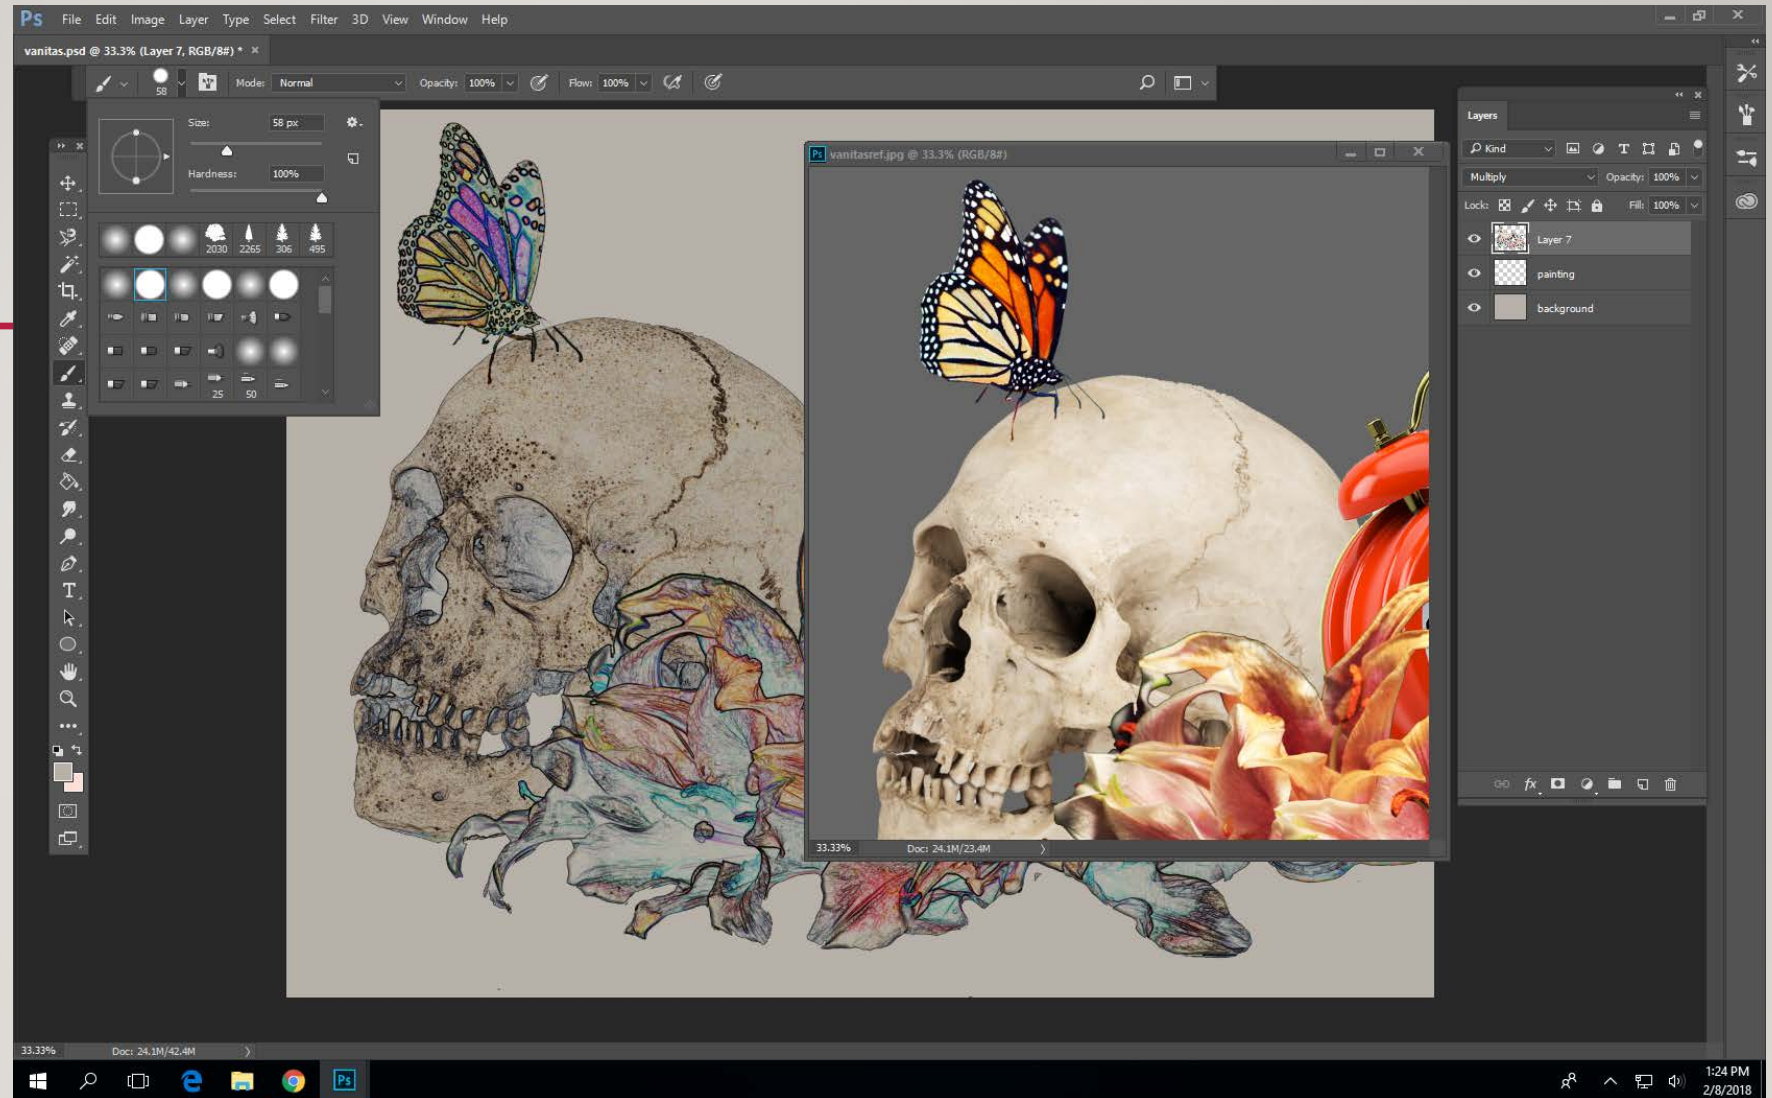

Click and drag it out
and make it smaller,
so you can see what
you are painting and
the reference collage
at the same time.

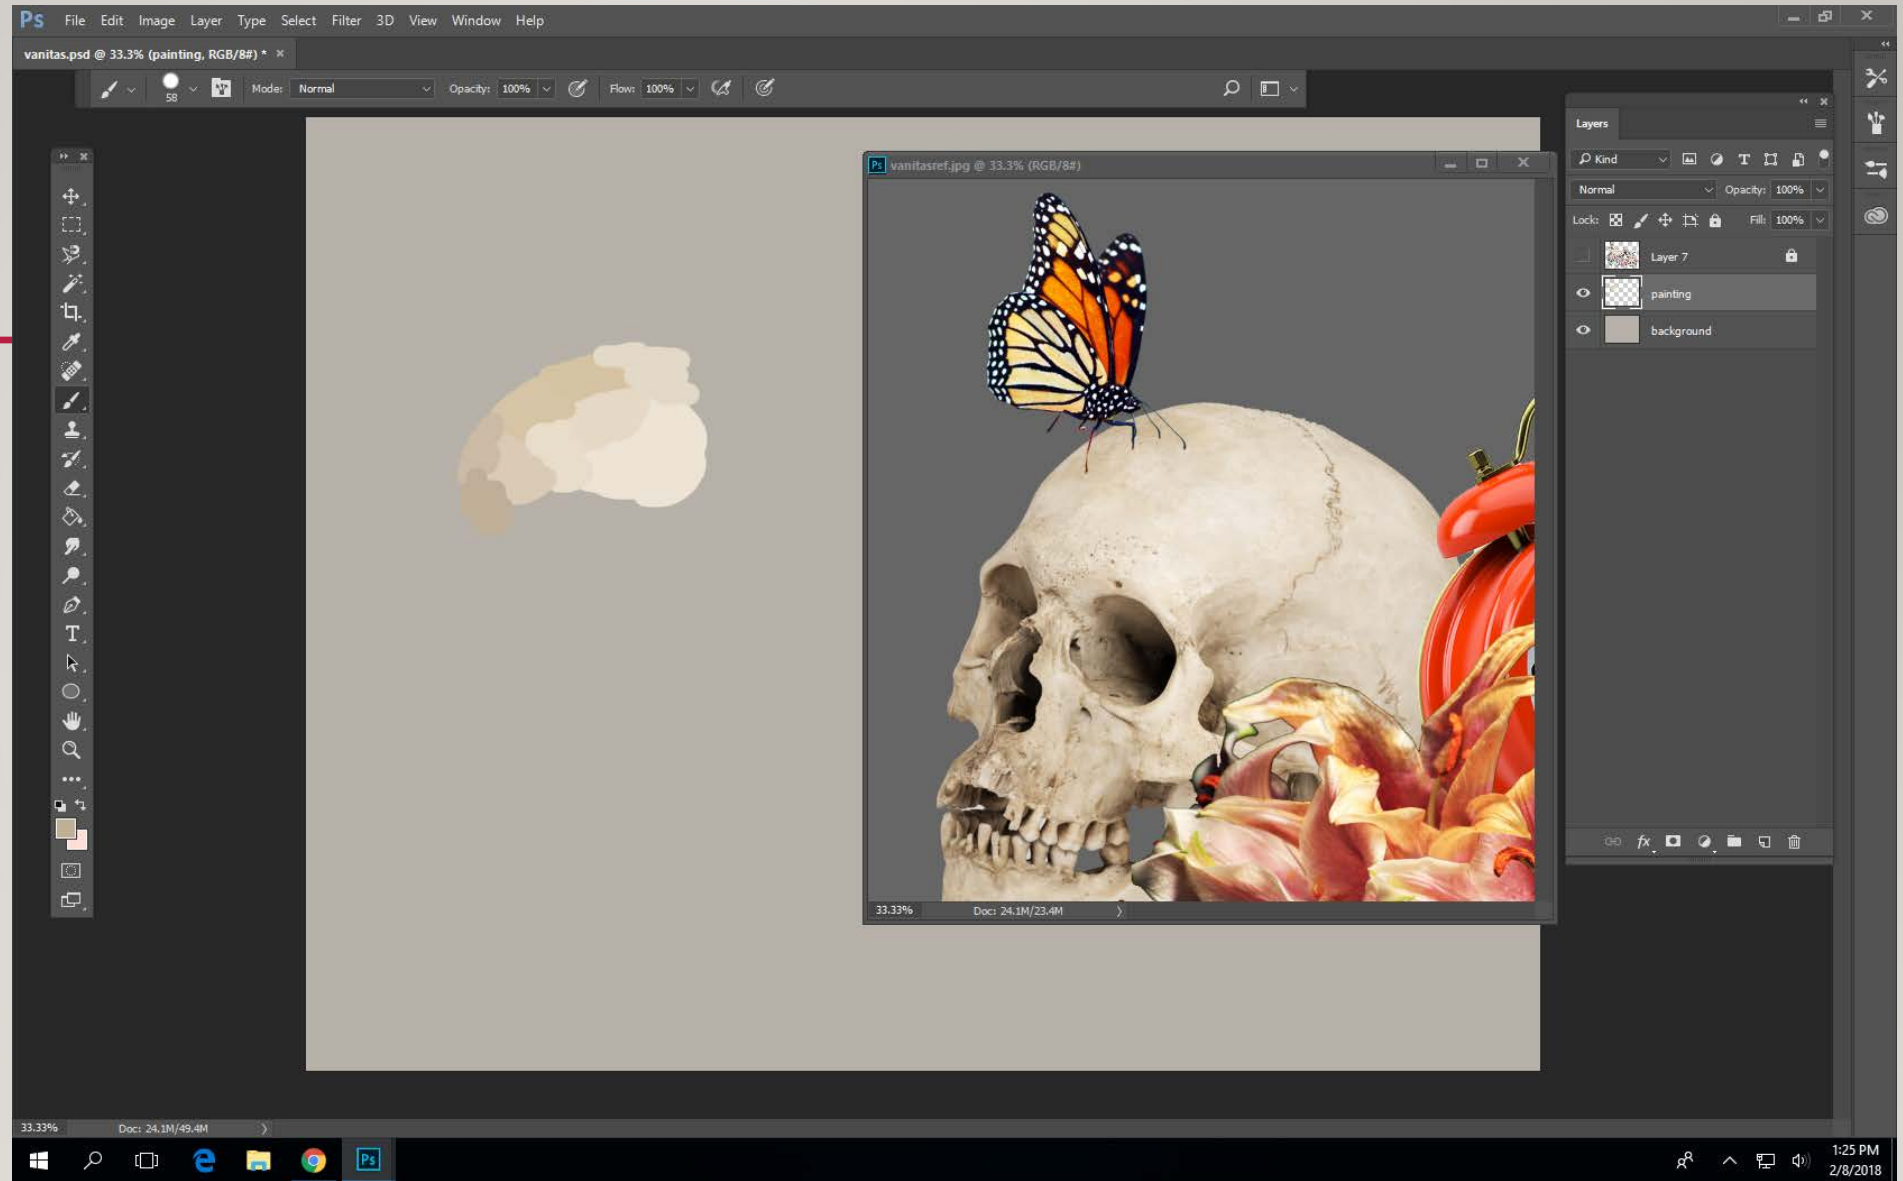

Using a **HARD ROUND BRUSH** at **100% OPACITY** start blocking out your image on the painting layer.

****Use the ALT key to turn the brush into the eyedropper selector tool to choose the accurate colors on the reference collage to paint****

Every so often, turn the eye off on your find edges layer, to see your blocking progress.

Once you are done blocking your colors of your still life add a gradient to your background. LOCK IT WHEN YOU'RE DONE!

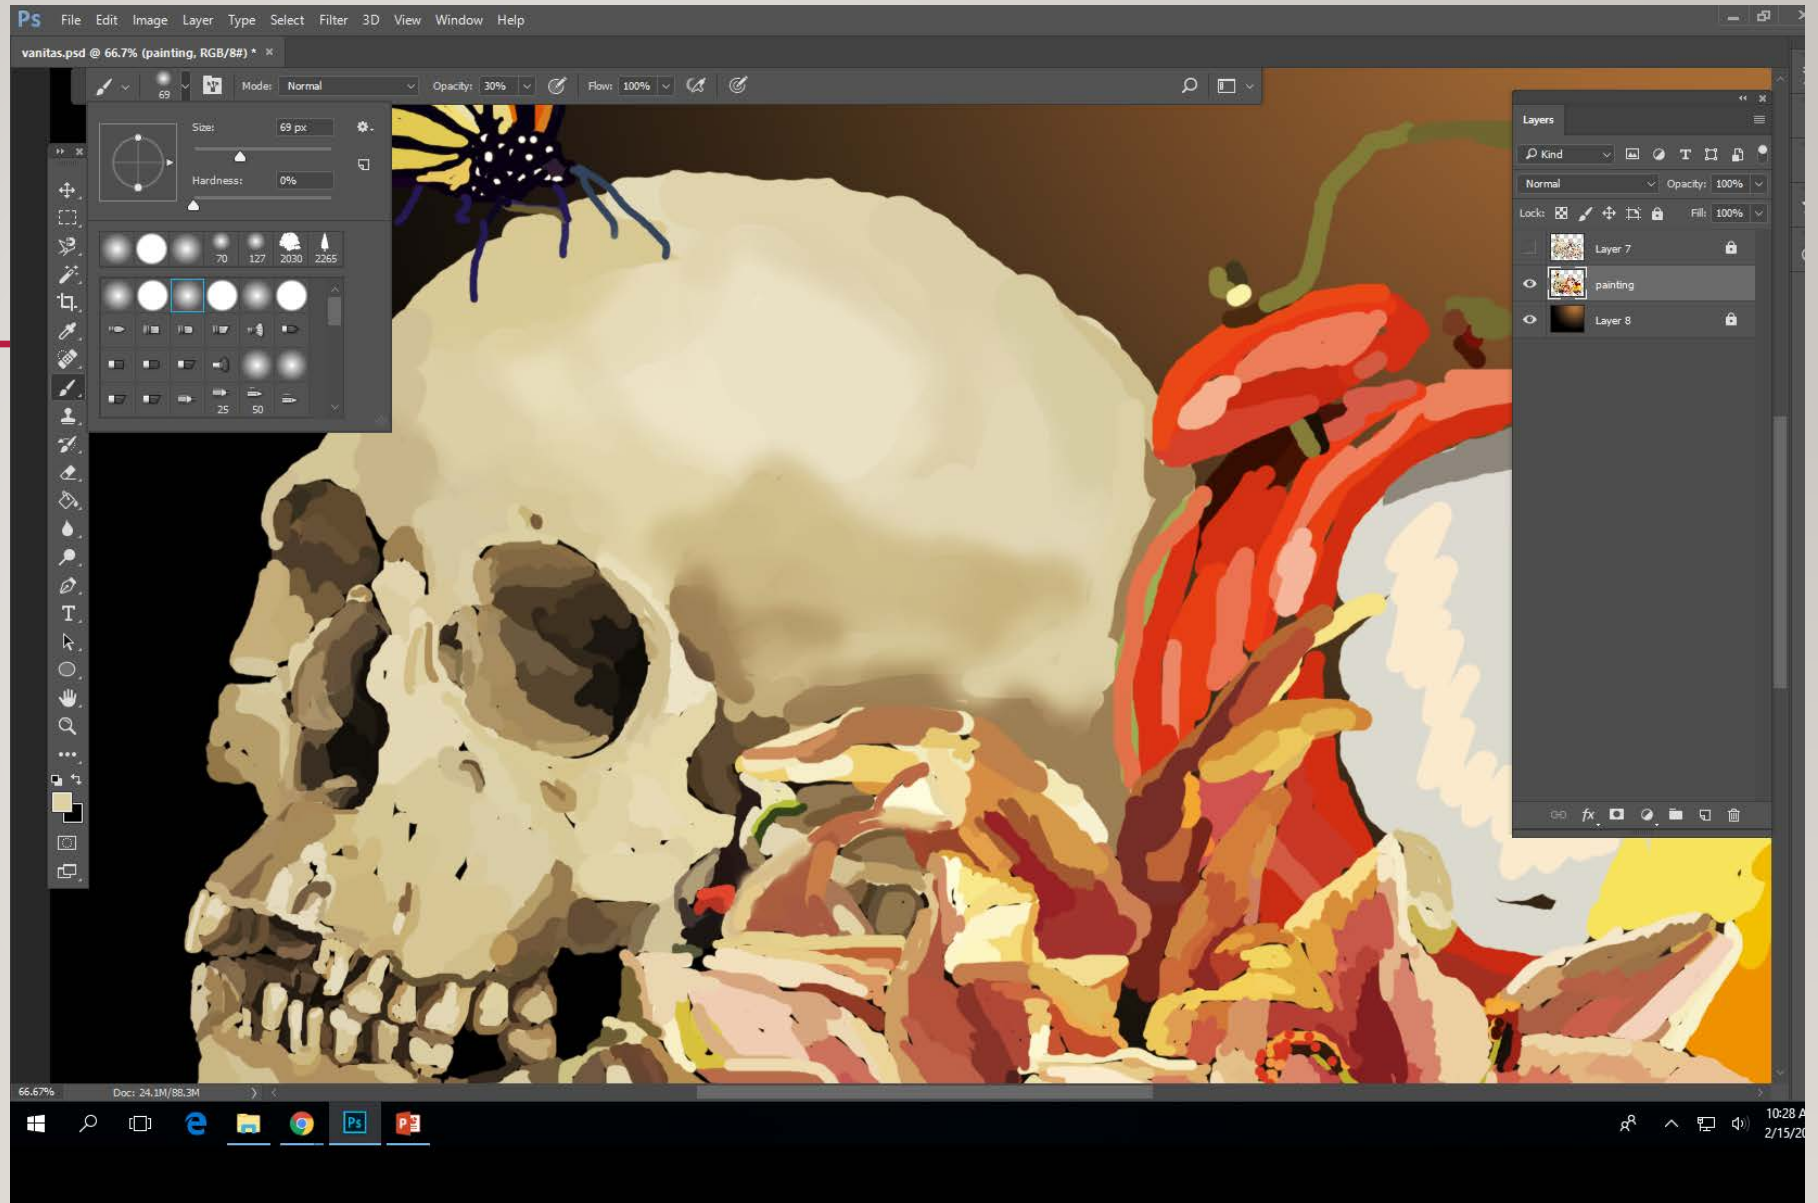

Remember we are trying to achieve areas of lights and DARKS.

Gradient tool is located with the paint bucket tool. It will combine the two swatch colors to create the gradient.

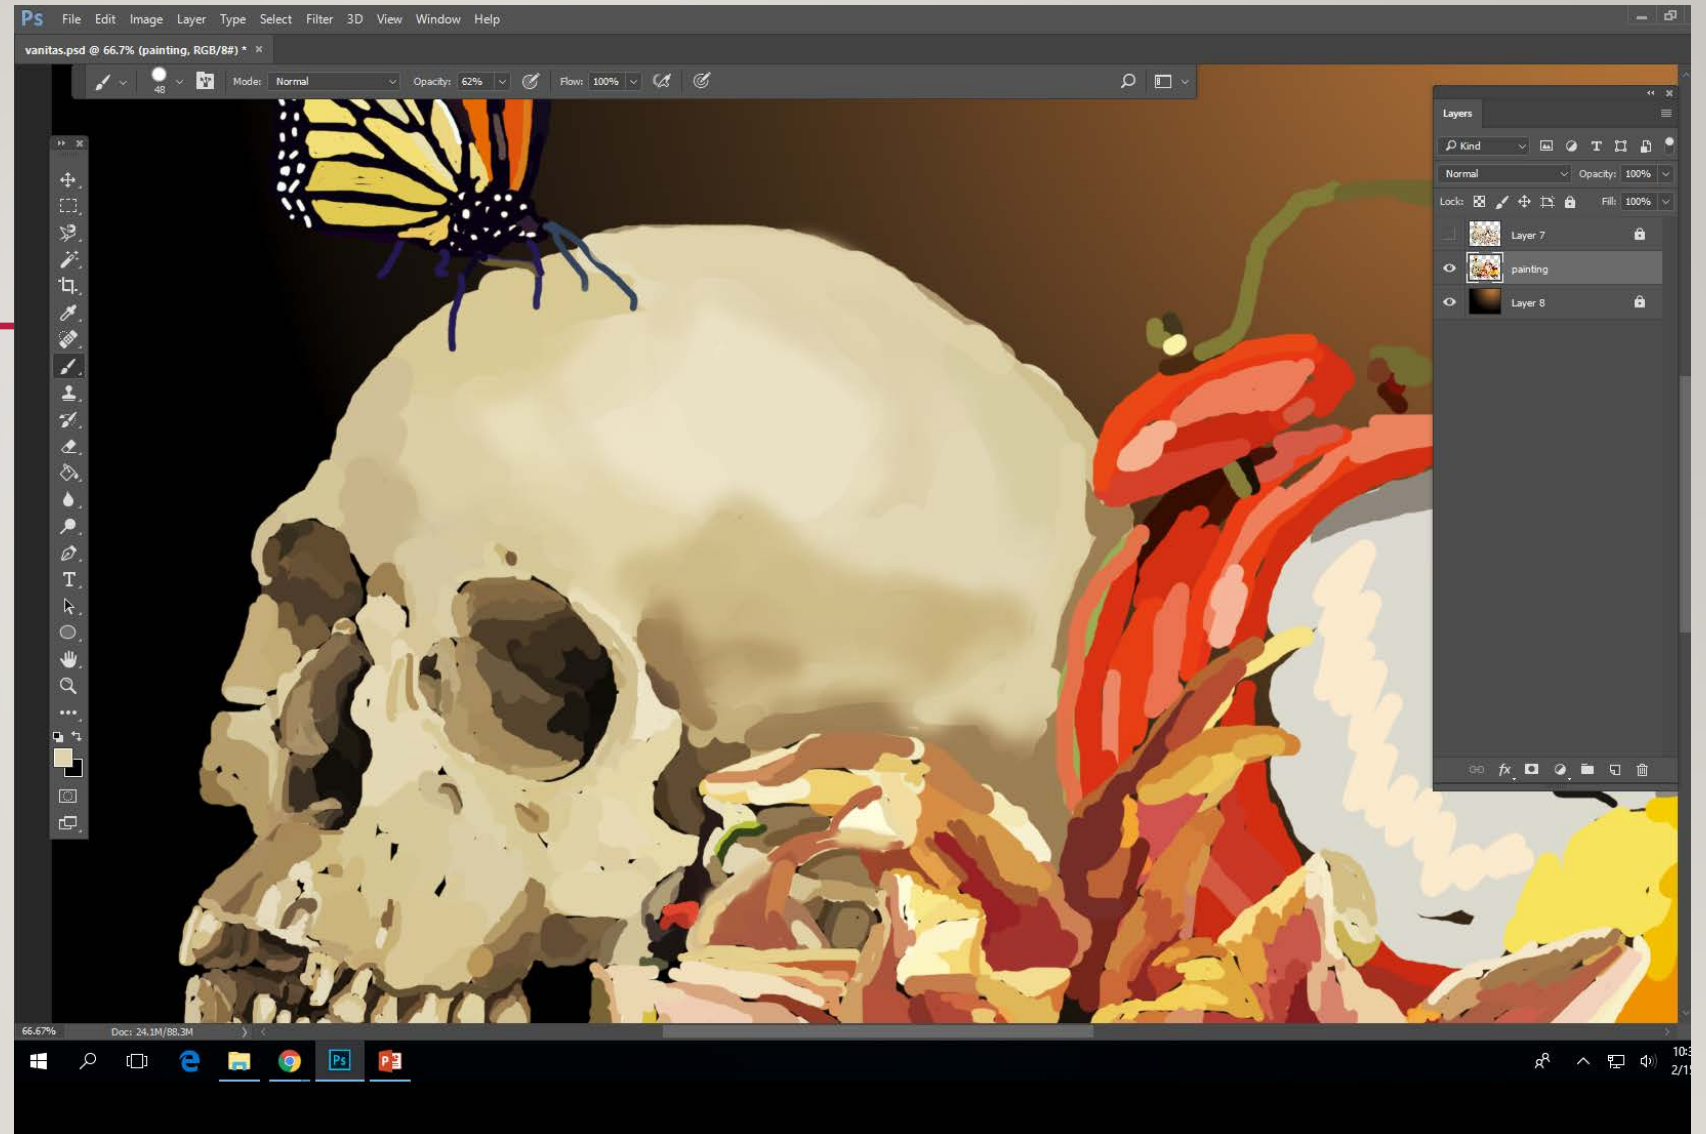

Start blending! Change your brush from a hard round to a soft round and lower your opacity! I suggest a 30%

****USE THE ALT KEY TO SELECT COLORS WHEN USING THE BRUSH****

Also use this opportunity with a hard brush to clean up your edges. You can also use the eraser tool at low opacities as well.

The key is to not go overboard! Don't over blend and don't put too much extra paint on your edges.

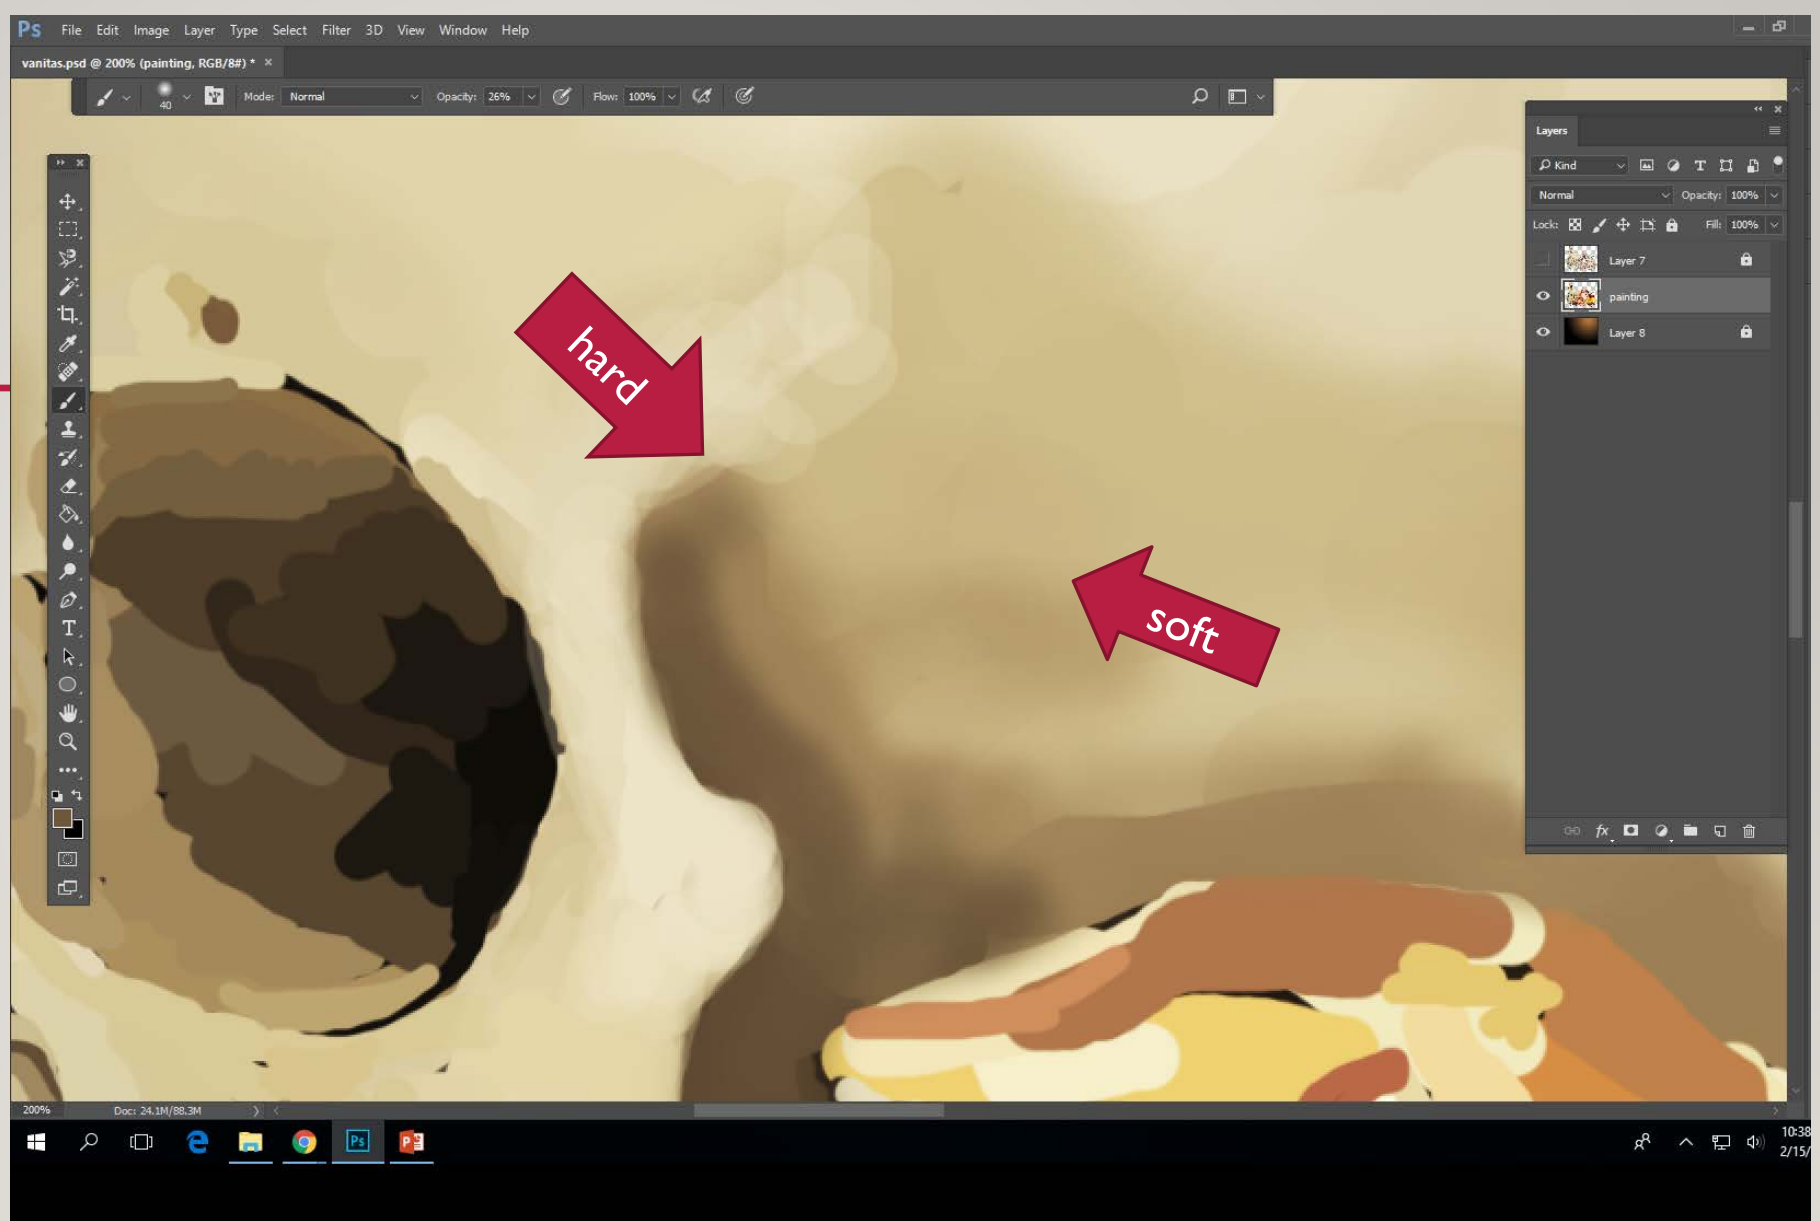

There will be areas where a blending with a hard brush is better.

Along sharp edges.

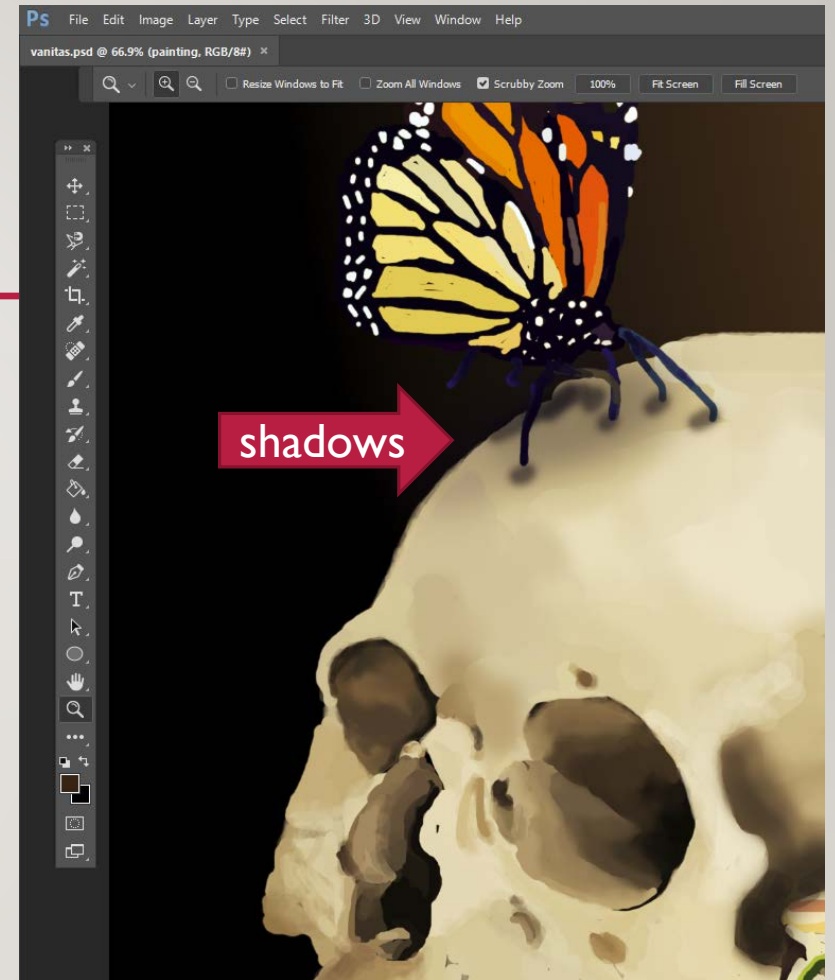

Along the edges of the objects

Objects or areas that are closer to the viewer would be more crisp blended with a hard brush and areas in the back should be blended with a soft brush. ETC.

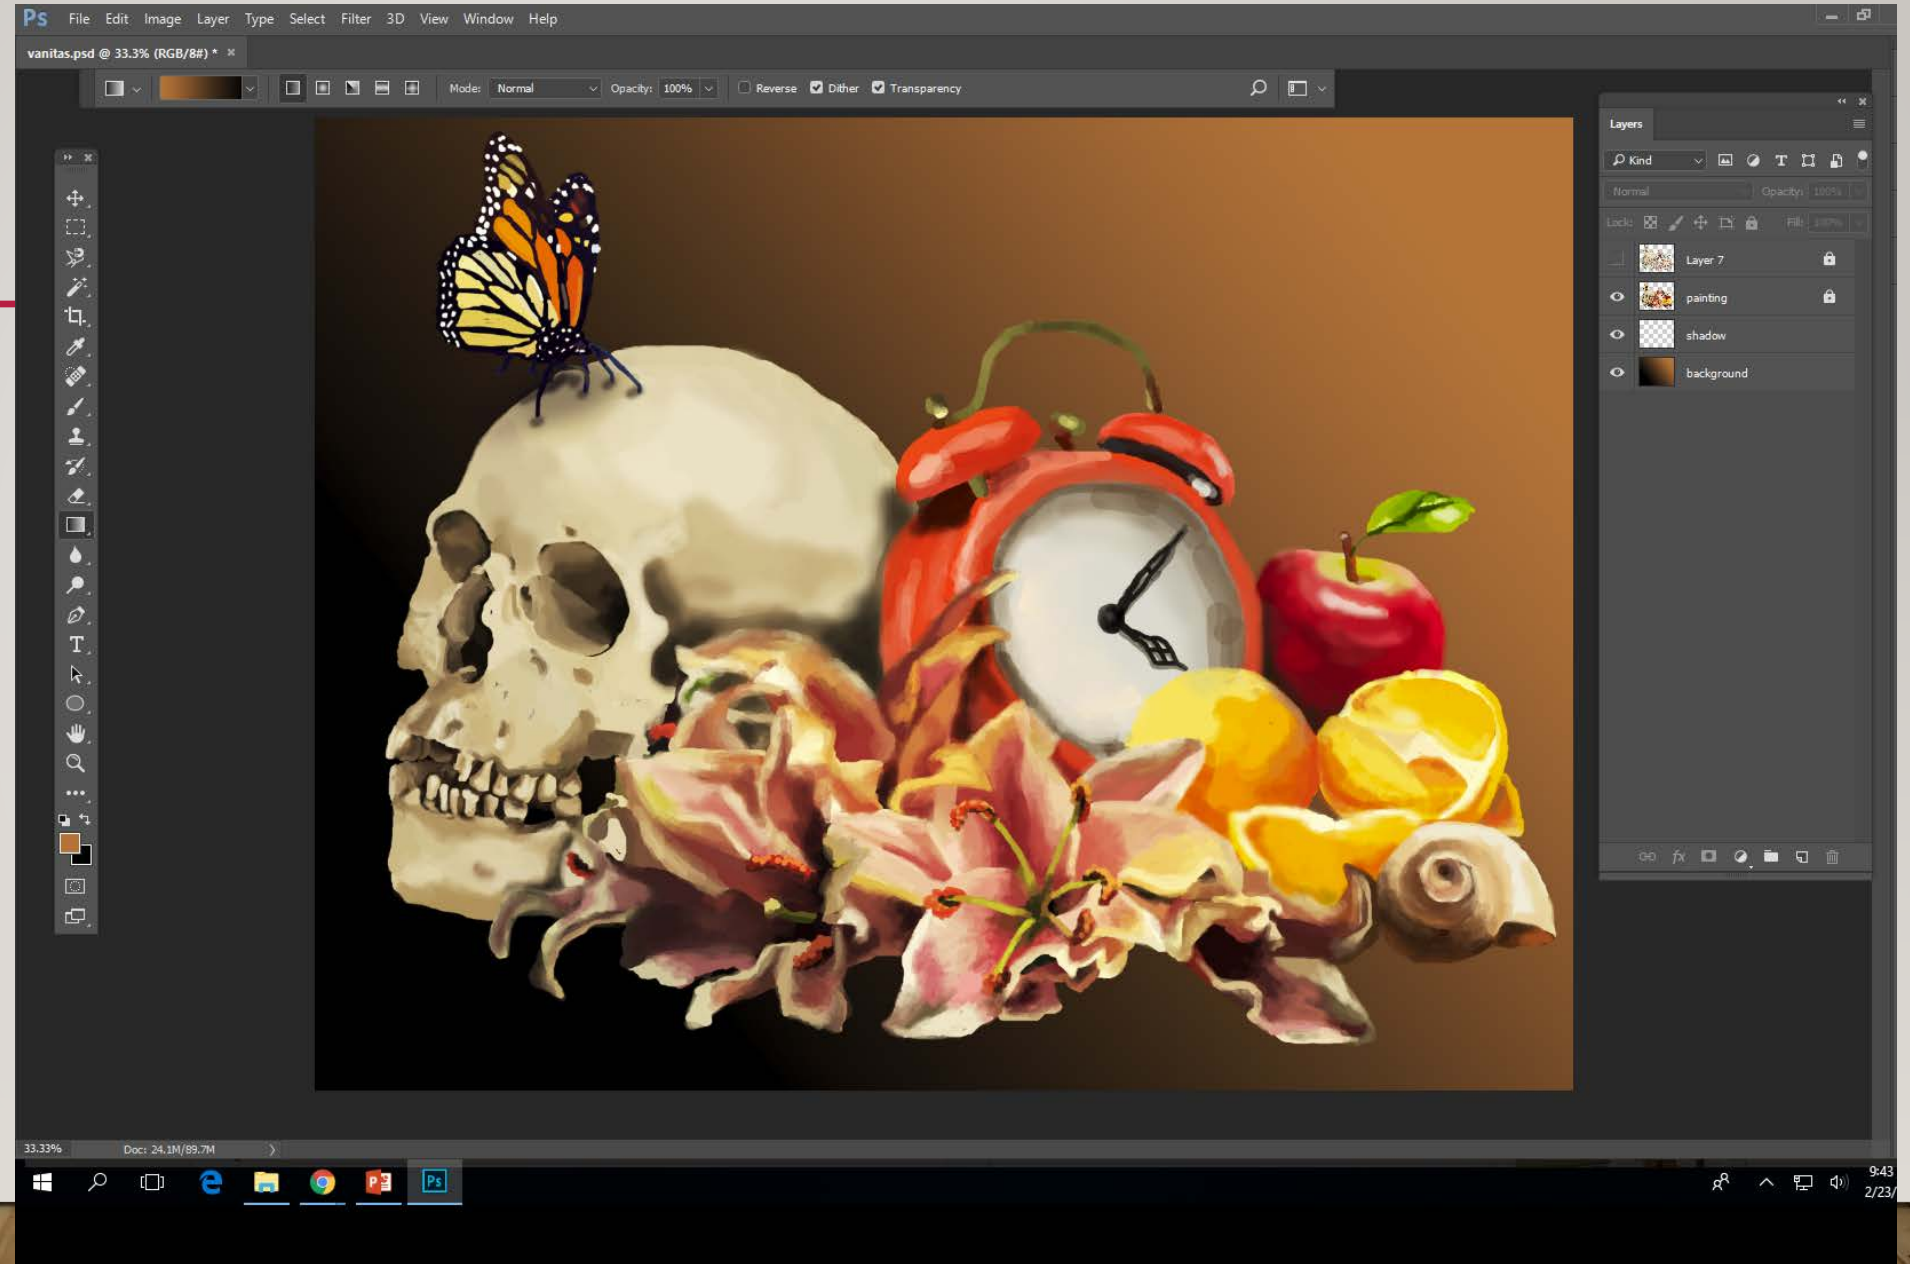

Add shadows where needed. They will not be in your reference collage since you put that together yourself.

Where objects touch, they will cast shadows onto each other

Once complete with your blending, make sure your gradient isn't too dark. We still need to see visible cast shadows.

Make a layer under your painting but above your background for the shadows.

Using a large soft brush in black at a low opacity slowly add in cast shadows. Focus on the edges of your objects.

Save as a jpeg and Place your finished painting into your google portfolio.
